## LED Preset Counters - Codix 716 / Codix 717 / Codix 717 EX

## Your benefit

- Very bright 8 mm [0.315"] high display
- Programmable as a pulse counter, frequency meter or an operating time preset counter
- Wide range Power supply 90 ... 260 V AC or 10 ... 30 V DC
- ${ }^{\text {sis }}$ sapprova
- $\left.\varepsilon_{x}\right\rangle$-proof version

## Inputs:

2 counting inputs
The maximum frequency is $20 \mathrm{kHz}(20 \mathrm{kHz}$ in the phase discriminator mode); it can be reduced to 30 Hz .

## Gate

Static gate input
pulse count mode: no counting, when the input is active
timer mode: Counting when active gate.lo or not activated gate.hi programmable

Reset
Dynamic reset input with the same function as the reset key. Resets the counter to zero, when counting up and sets it to the preset value when counting down Key

Static key lock input. The keys are locked as long as this input is on. The preselection display key remains active

## Further product features

- Display range -199999 ... 999999 with zero blanking
- Easy to use and programmable with only 4 keys
- Option: serial interface

RS 232, RS 422, RS 485

- Relay or optocoupler output
- Scaling factor 0.0001 ... 99.9999

716: one preset
717: two presets

LED Preset Counters - Codix 716 / Codix 717 / Codix 717 EX

## Programming:

The counters 716/717 are programmed by means of the 4 front
keys. The operator guidance on this display allows a simple and intuitive programming. All settings can be carried out by
selecting the corresponding parameters in this menu.
The follow modes can be programmed

1. Pulse counter
2. Frequency meter
3. Time meter

## Programmable are:

Input polarity:
Positive (pnp) or negative (npn). The selection is valid for all inputs.

## Pulse or time counting modes:

- adding with counting; start at 0
- subtracting with counting start at the preset (716) and at preselection 2 (717)
- adding with automatic reset when the preset (716) or the preset 2 (717)is reached
- subtracting with automatic positioning at the preset (716) or preset 2 (717) when 0 is reached
Input types in pulse counter mode:
Cnt.Dir 1 counting input
1 counting direction input
uP.dn Differential counting
1 adding input
1 subtracting input
quad Phase discriminator to connect encoders with 2 signals shifted by $90^{\circ}$
quad2 Phase discriminator with double pulse processing, to connect pulse sources with 2 signals shifted by $90^{\circ}$

## Decimal places:

Data can be displayed with one, two or three decimal places

## Factor:

For an optimum matching of the measuring signal, the displayed values can be weighted by a scale factor between 0.0001 and 99.9999.

## Output signal:

The function of the output signal can be preselected (independently for both outputs of model 717) as a normally closed, normally open or a negative pulse signal.

## Maximum counting frequency:

The maximum counting frequency can be set to 30 Hz or 20 kHz . Timer:

Counting can be carried out in $\mathrm{h}, \mathrm{min}$, s or in h:min:s. The number of decimal places determines the resolution. A resolution up to the ms-range can be achieved.
